

slurry systems, inc.

To our Colleagues in the Industry,

When you are in need of open-heart surgery, you go to the best surgeon you can find. You often research and locate a surgeon who has performed hundreds of procedures with great outcomes and who is respected by others within his profession. You and the surgeon discuss the procedure, establishing a confidence level and uniting as a team.

If you are looking to construct a slurry wall where the Vibrated Beam Technology is the best solution, you don't go to a firm that has little knowledge of or limited firsthand experience with the technology. You go to the experts. My father brought this technology to the United States over 40 years ago and our team has self-performed more than 100 successful vibrated beam projects throughout the United States and Canada. To date, **Slurry Systems, Inc.** has never had a single project recalled and has delivered results with 100% satisfaction, 100% of the time.

Our firm has extensive knowledge of deep foundation work and is the originator of Vibrated Beam Technology in North America. We have an outstanding safety record and extensive experience working with the Army Corps of Engineers, the Department of Defense, and the Environmental Protection Agency. Throughout the years, we have been challenged by firms much larger than our small family business; however, we have continued to persevere earning the respect of our clients and peers throughout the industry.

Please do not be misled by firms that make claims that they are experts in Vibrated Beam Technology. Ask how many projects the firm has **self-performed**. You'll find that many have contracted this work out to others (often to us!) or have attempted to self perform this technology with poor results, costing their clients time, money, and compromising the integrity of the vibrated beam slurry wall technology. All of our slurry mixing plants and vibrated beams are designed and fabricated in-house.

Slurry Systems, Inc., a certified Women's Business Enterprise, is proud to announce that we can offer you the following services to ensure the success of your Vibrated Beam project:

- Dynamic Construction Services combined with Expert Consulting
- Mixing Plants & Vibrated Beams Fabricated Specifically for your Project Needs
- Provision of Vibrated Beam Specifications
- Assistance with Federal, State & Local Regulatory Bodies

We urge you to call **Slurry Systems, Inc.** today or visit us at **www.slurrysystems.com**. We would love to talk with you and understand your project. We believe that getting to know our firm and capabilities will increase your level of confidence in Slurry Systems, Inc. and we look forward to having you join our list of satisfied customers.

Sincerely,

Dana Wesolek, P.E.

President
